OR, AN

P.P. 2405

ALMANACK

For the YEAR of our

LORD GOD 1722.

Being the Second from Bissextile or Leap-Year, and from the Worlds Creation, 5671.

Wherein is contained the Lunations, Conjunctions, Aspects and Effects of the Planets; the Increase, Decrease, and Length of the Days and Nights; with the Rising, Southing and Setting of the Planets and Fixed Stars throughout the Year, whereby may be known the exact Hour of the Night at all times, when either the Moon or Stars are seen; and an Equation Table, for the rectifying Pendulum Clocks and Watches.

Calculated according to Art, and referred to the Horizon of the antient and renowned Borough-Town of *Stamford*, (formerly a famous University) whose Longitude is 24 deg. 20 min. and Latitude 52 deg. 41 min. fitting all the middle Counties of *ENGLAND*, and without sensible Error the whole Kingdom.

Non est è Terris mollis ad Astra Via.

By JOHN WING, Philomath.

IMPRIMATUR, R. I.

LONDON.

his Table ſhews the Intereſt of any ſum of Money from 1 *s.* to 100*l.* from a day to a year. And by the help of Addition you compute the Intereſt of any ſum whatſoever. And note, that for greater exactneſs the peny is divided into a 100 parts; ſo that 25 are a farthing, and 50 parts an half-peny, and 75 parts 3 far-, &c.

Example:

e Intereſt of 100 *l.* for ſix months one Week and one day, is thus d by the Table.

		l.	*s.*	*d.*	*q.*			
Intereſt of 100 *l.*	for 6 mon.	03	0	0	00	viz.	*l.*	*s.* *d.*
	for 1 week,	00	2	3	61		3	2 7 half-peny
	for 1 day,	00	0	3	94			
		03	2	7	75			

A Table shewing the Hour and Minute of the Moon coming to the South the first six Months of this Year, 1722.

WIN

WING.

A PROGNOSTICATION,

For the Year of our

LORD GOD, 1722.

Being the second from the Bissextile or Leap-Year.

Wherein is contain'd the time of the Sun's Ingress into the four Cardinal Signs: With a Figure of the Heavens at the time of the Sun's Ingress into *Aries*. An Account of the *Eclipses*. A Table shewing the Hour of the Day by a Rod or Hand-stick: Also a pleasant Chronology of Memorable things since the Creation of the World: With an account of an unusual Conjunction of the three Superiour Planets.

By *John Wing*, Philomath.

LONDON:

Printed by *W. Pearson*, for the Company of STATIONERS. 1722.

A Table shewing the true Hour of the Day by a plain Staff divided into 10 equal Parts.

WING. 1722.

*** Note: That q stands for Quadrans a quarter of a part; ſ for ſemiſs half; and d for Dodrans three quarters of a Part.

To find the true Hour of the Day by the former Table.

TAke a Staff of what length you pleaſe, and with a paſ of Compaſſes divide it into ten equal Parts, marking them upon the Staff; then in ſome level Place where the Sun doth ſhine, ſet it upright, and mark where the end of the ſhadow falls; which done, meaſure with your Staff the length of the ſhadow, and note the Parts it contains, which find out in this Table right againſt the Day of the Month, and over head you will find the true Hour of the Day; as will appear more clearly by Example.

Suppoſe the 9th of *April*, or 13th of *Auguſt*, I ſhould find the ſhadow of the Staff to be 36 Parts and a quarter of a Part more, that is, three Staffs length, and a quarter of a Part, therefore ſeeking in the Table, againſt the ſaid Days, I find 30 ¼ which is 30 Parts and a quarter; and ſee over head that it is then either 7 a Clock in the Morning, or 5 in the Afternoon; ſo that if your Obſervation was in the Morning, it was 7; but if in the Afternoon, 5 a Clock.

Thus the 13th of *February*, or 8th of *October*, if the ſhadow of the Staff be juſt 19 Parts, it is 12 a Clock, if 9, it's one a Clock, if 24, two a Clock, if the Obſervation be made in the Afternoon.

Thus you ſee the Hour of the Day is exactly and ſpeedily found, by a Rod or Staff, and the help of this Table; and likewiſe by the *Kalendar* Part may the Hour of the Night be known either by the Moon, Planets, or Fixed Stars, being of Excellent Uſe to all ſorts of Men.

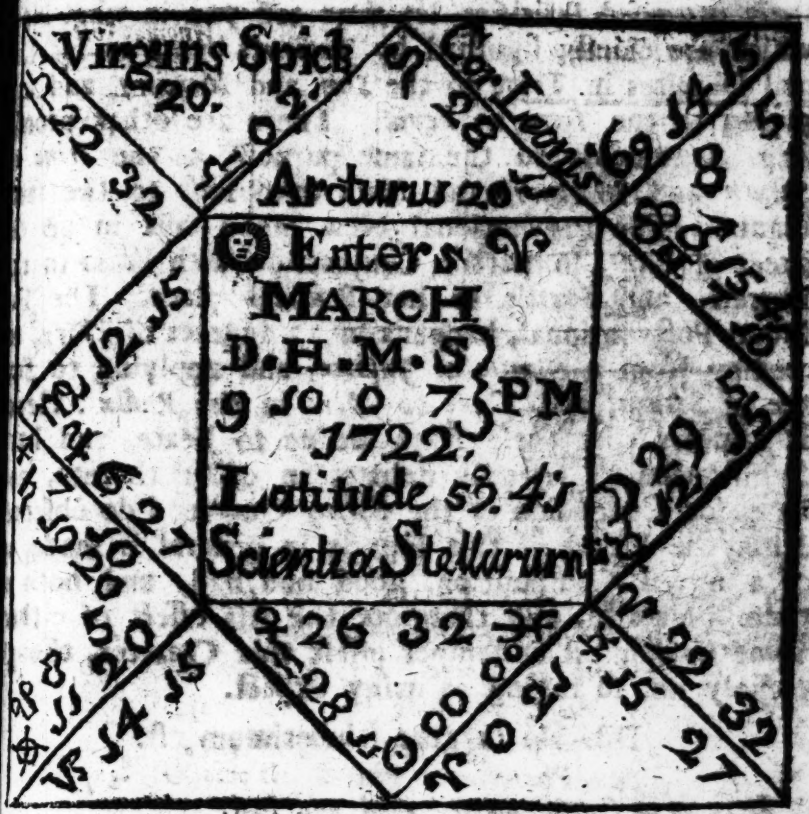
The Ninth of March *Sol ushers in the* Spring,
Which doth revive and cherish ev'ry thing;
Dame Flora *now appears in fresh Attire,*
And distributes what Nature doth require.
The Fields in order now are coming on,
With pleasant profits for the use of Man.
Such are the blessings Heaven doth bestow,
Of us unthankful Mortals here below.
Stop here my Muse, and look the other way,
See what returns ingrateful Persons pay,
To th' Supreme Powers that give us all this Good,
Which things by some are little understood.
Return to God now in these blooming Days,
And be not wanting to return him Praise.
For Peace and Plenty, and all other things,
That maketh happy, Commons, Nobles, Kings.
All no unworthy thing, but always be,
Found to promote, Peace, Love and Loyalty.

Of the Spring *Quarter.*

THE *Spring* Quarter, the most pleasant and delightful part of the Year, begins this present Year in the *Meridian* of *London*, on *Friday* the 9th Day of *March* at 2 Min. 7 seconds past 10 at Night, but happens two Minutes sooner in the *Meridian* of *Stamford*, for which this Figure of the Heavens is Adjusted, when 12 Degrees of *Scorpio* is ascending in the East, and *Mars* Lord there-



of in opposition to *Saturn*, from the Second and eight Houses, and from the Signs *Sagitary* and *Gemini*, which will make the World sensible of the Effects of their Malignant Rays, especially *Spain*, and other places subject to those signs, this remarkable opposition is made from; and *Venus* being lately seperated from the square of *Saturn* will add to, and Influence the ill effects of the former. *Haly pars Octava*, pag. 391, saith on such a position. *Etiamsi applicatio ista fuerit de oppositione, significat quod homines in se invicem Discordabant & prosequentur se mutuo odio & cessabant se familiater invisere, & detrabet unusquisque alteri*; and very often occasions Wars, Commotions, &c. The other Configurations of the Celestial Bodies at the time of this Ingress are of a more propitious Nature, and signifies much good to several Countries, and most of them in the Christian part of the World, and *England* is not the least in partaking of

these

these promised Felicities, let time tell you in what li
which are chiefly signified by *Jupiter's* being in his
mal Dignities in *Trine* to the *Sun*, and *Mercury*, and
plying to the *Trine* of *Venus*. There are other pro
fing Arguments to the same purpose, as the *Trine*
Saturn and *Mercury*, and *Mars* in *Sextile* to the
Planet. The Preventional New Moon falls in 26
grees of *Pisces*, in partile Conjunction with *Venus* in
Ingress, and *Sextile* to her Radical place. The
Moon Postventional, happens in 12 degrees of *Libra*
ceeding from a *Sextile* of *Jupiter*, and applying to
tile of *Saturn*, and *Trine* to *Mars* in the *Radix*. He
it appears that these Rays incline to Peace, and
signification of friendly debates in order thereto,
here for Conclusion of the *Spring* Quarter I do obser
That the Figure of this Ingress in general is made
of a mixed Composition, good and bad, and both
them powerful, and therefore the less effect of eith
Some Epidemical Distemper infest this Quarter, thou
possibly not so raging as many expect.

Diluculo surgere saluberimum est.

Here is a Complecation, good and bad,
Better and worse, both will be seen and had.
From the Celestial Powers doth appear,
Both Peace, and Love and enmity I fear.
May th' right increase, and the wrong be suppress,
Then all things would appear for the best.

Of the Summer *Quarter.*

THE Summer Quarter is always said to begin whe
this our earthly Globe inclining Southward 23 De
grees 29 Min. towards the Sun, will volve and remov
us her Northern Inhabitants to the greatest Portio
of Day, or when the Sun (according to appearance)
enters the first Scruple of *Cancer*, which either wa
taken falleth this Year on *Sunday* the 10th Day o
June, 9 Minutes past 10 at Night, at which time
degree

degrees of *Aquary* is Ascending, and 4 degrees of the Archer is upon the Midhaven. The Planets places at the aforesaid Time are as followeth, ☉ 0° 00′ ♈. The Moon is in 29 degrees of *Virgo*, ♄ 14° 21′ ♐ 27° 40′ ♍. ♂ 9° 25′ ♌. ♀ 19° 33′ ♓. ♃ 18° 41′ ♓. ♅ 2° 50′ ♉. ♆ 3° 15′ ♓. Aspects, △ ♄ ♂. △ ♀ ♆ ☿. ✶ ♆ ☽. ☌ ♀ ☿. ✶ ♀ ☽, ✶ ☿ ☽. All that I observe in the Pre. and Postventional New and Full Moon is, that the former is applying to the Quadrature, and the latter to the Time of her place at the Ingress, so that here is no Rays that seems to cause Debates, Differences, or Controversies amongst the Grandees of the World, but the contrary, for the full Bent, or Powerful Influence of the Celestial Bodys tends to Peace, Love, and Unity, which will be experimented where it is wanting in a short Time: I shall not presume to predict particulars (according to the Advice of the Famous *Ptolemy*) only modestly hint, for now the generality, &c. are in daily expection of famous things,

The Comforts of the Spring *are almost gone*
Tho' happy Tydings are continu'd on,
Of Love, true Friendship, Amity and Peace,
Binds up the broken hearted, and gives ease;
The Times are turn'd, or turning for the best,
And each Man sits under his Vine at rest.

Concordia nummis præponendo.

Of the Autumn *Quarter.*

THE Autumn or Harvest Quarter begins at such time as the Sun toucheth the first Scruple of the Equinoctial Sign *Libra*, or more really when the Earth enters *Aries*, hath volved her self at Right-angles to the Sun, and receiveth a like Portion of Light and Darkness, which either way taken happens this Year on *Wednesday* the

the 12th Day of *September*, half an Hour past 11 the Forenoon, when 28 degrees of *Scorpio* Aſcends t *Eaſt-Horizon*, and 22 Degrees of *Virgo* Culminates. T Planets places and Aſpects are as followeth ☉ 00° 0′ ☽ 8° 20′ ♐. ♄ 12° 53′ ♐. ♃ 1° 51′ ♐. ♂ 9° 22′ ☿ 12° 14′ ♑. ☿ 4° 23′ ♎. ♁ 6° 40′ ♉. ☊ 28° 1′ Aſpects and applications of the Planets, *viz.* the Sun applying to the *Sextile* of *Saturn* and *Jupiter*, and *Jupi* applys to the Conunction of *Saturn*, *Mars* and *Mercury* *Sextile* to *Saturn* and *Jupiter*, and the Moon goeth fro a Square to the trine of *Jupiter*, and applys to the Squa of *Saturn*, *Mars*, *Mercury*, and the Sun are in Conunctio in *Libra* the Sign of *Juſtice* in the 10*th* Houſe, and t Moon applying to the trine of *Venus*, with other favour ble and friendly Configurations; So that we have gre reaſons to expect propitious Times, as Peace, Plenty, ſereene and healthful Air; and other bleſſings for the b fits of Mankind, for the Arguments from this Ingre are exceedingly augmented and takes Place accordingly there are matters deſign'd or painted out by them, e alted and magnified, alſo conſiderable alterations many places and eminent changes, tending to the benef of Mankind.

The Seaſon ſeems to be ſeaſonable, temperate, an good, and the rigidneſs of Epidemical Diſtempers abat ed, and generally People enjoy a better ſtate of healt than formerly.

Titan's *in* Sextile *to Impartial* Jove,
which doth Inſpire the Univerſe with Love,
Away you Miſcreant Subjects of Diſpair,
That Dream of Fogs *and think 'twill ne'er be fair;*
Shake off your penſive thoughts, waſh down your ſorrow,
Phœbus *appears and bids the World Good-morrow.*

Sobrietas in primis optimates decet.

O

Of the Winter *Quarter.*

THE Winter Quarter makes its Entrance at such time as our Earthly Globe by its Circumrotation hath volved it self to the greatest Inclination, whereby we being fartheſt deflected from the Sun's Rays, receive leaſt Light, and cauſes our ſhorteſt Day and ſhorteſt Night, or according to Appearance, when the Sun enters *Capricorn*, which either way taken, falls this Year on *Tueſday* the 11th Day of *December* at two in the Morning, when 21 Degrees of *Libra* is Aſcending, and 28 Degrees of *Cancer* is upon the *Midhaven*, at which time the Planets places and *Aſpects* are as follow. ☉ 00° 00′ ♍. ☽ 23° 18′ ♊. ♄ 22° 21′ ♐. ♃ 20° 16′ ♐. ♂ 10° 20′ ♐. ☿ 9° 11′ ♏. ♀ 10° 55′ ♐. ⊕ 14° 28′ ♈. ☊ 23° 13′ ♊. *Aſpects*, ☌ ♄ ♃. and ☌ applying to the Conjunction of them both *Mars* and *Mercury* are in Partile Conjunction in *Sagitary* and *Mercury* applys to the Conjunction of *Saturn* and *Jupiter* in the ſame Sign, and the Moon is lately ſeperated from the Oppoſition of all the Superiour Planets. Here is work for the Aſtrologer to Diſcant upon, and to undeceive the thinking part of Mankind, that there are means uſed to accommodate the Wars and Diſorders in *Europe*, but that will take up ſome time, which I hope I ſhall be able to ſpeak more fully in the enſuing Year.

The beginning of this Quarter ſeems to prove favourable, but the frigid Seaſon approaches which will put an end to the Actions of the Year.

11th December 3 hor. 38 m. Af.

The Moon's obſcur'd five parts (of 12) and more
And ſeen (if the Air be clear) all England *o'er,*
But Cynthya's *Labour is, with little pain;*
Her throws are eaſy; She's ſoon light again,
Were Men eclipſed but reſtored thus,
Then Honour would more welcome be to us.

Intelligens Magiſtratum poſſidebit.

Of

Of the Eclipses *this Year.*

THere will happen in this present year Five *Eclipses*, three of the Sun, and two of the Moon: The two first of the Sun will not be seen to any part of *Great Britain* the other three will be visible here, if Clouds interpose not, and they happen as followeth.

The first is an *Eclipse* of the Sun the 6th Day of *January* near 11 in the forenoon, but by reason of the great *South Latitude* of the Moon it cannot be Visible here but will be conspicuous in the more Southern Parts of the Earth.

The second is also an Invisible *Eclipse* of the Sun the 2d Day of *June* neat ☌ at Night.

The Third is an *Eclipse* of the Moon to be seen if Clouds do not hinder, it happens *June* the 18th in the Morning, according to the followning Calculation.
